

## What's Changing - Billing

### Billing Invoice Date Error

NEW FUNCTIONALITY	WHAT IT MEANS TO YOU
Billing Invoice Date error.	When running the finalize and print step in processing billing invoices, the billing Invoice date determines the accounting date of the transactions. In 8.8, if an invoice date of a closed period is used, there is a warning message but not a hard stop. In 9.2 this message has been made a hard stop and the finalize and print process will not be able to be initiated until the billing invoice date is changed to a date within an open period.
